

Build Capacity to Support Learning

AEM's network of more than 150 educators, early childhood specialists, researchers, and state and local government leaders help school districts build new capacity around tools and technology to better support student learning. We help educators make innovations in education.

Our experts have supported US Department of Education technical assistance programs such as:

TEACHER QUALITY PROGRAM

We engage grantee districts, charters, institutions of higher education, and not-for-profit education organizations nationwide to help them improve the effectiveness of the educators they serve. Our experts provide topic-specific content expertise to help grantees address their unique challenges.

STATEWIDE LONGITUDINAL DATA SYSTEMS

We assist states in the successful design, implementation, and use of longitudinal data systems that provide insights from early learning to workforce and that can be applied directly toward improvements in the classroom.

CENTER FOR INTEGRATION OF IDEA DATA

We promote best practices in data management across states to improve collection, reporting, and use of high-quality IDEA data. We also support the integration of IDEA data systems with each Statewide Longitudinal Data System.

RACE TO THE TOP – DISTRICT

We provided expert support to more than 80 school districts across the US to design personalized learning systems, harnessing knowledge and experience across multidisciplinary groups to optimize how students learn and experience their learning environments.

Our tools and resources, such as best practice guides and rubrics for implementation, are used in all US states and territories to help educators improve service to students and parents from early childhood through college and career.

In addition to publications and online resources, we also offer instructional webinars and online communities of practice. Offline, we regularly appear at conferences, regional meetings, and other in-person engagements. To inquire about upcoming opportunities, visit our website:
